OFFICIAL TENDER CLARIFICATION NOTICE

Clarification Queries & Technical Enquiries

Provision of Cloud-Based Resource Booking SaaS for School of Film & Media Studies (FMS)

TENDER REFERENCE
FY26/FMS/003x/ITQ

PROCURING AUTHORITY
Ngee Ann Polytechnic (NP) — FMS

ATTN / OFFICERS-IN-CHARGE
Ms. Hong Hui Ling & Mr. Reyas MD

SUBMISSION PURPOSE
Prior Review for 15 Oct 2026 Site Briefing

> **Clarification Submission Note:** To facilitate a focused, productive discussion during the Compulsory Site Briefing on **15 October 2026 (11:00 AM)**, the prospective vendor respectfully submits the following technical, operational, and architectural clarification queries. We welcome formal written responses via GeBIZ Addendum or verbal discussion during the briefing.

1. Booking Types & Operational Workflows

Clause 4.2 (Mandatory)

Q1.1 Operational Mechanics & Governance for Group Bookings

Clause 4.2 lists "*Group bookings*" as a mandatory booking type without defining the operational workflow. Could FMS clarify:

1. Are student crew members registered as secondary participants under a primary applicant, and does the system evaluate individual borrowing quotas or a shared team quota?
2. In case of overdue, damage, or loss of production equipment, does disciplinary liability fall solely on the primary borrower or jointly across all tagged crew members?
3. Can authorized group members independently retrieve/return the gear using their personal QR mobile pass at the counter or smart locker?

> **Context:** Ensures the database schema (participant rosters vs. single-user loans) and RBAC policies accurately reflect FMS film production crew workflows.

[Authority's Response / Notes]

Q1.2 Eligibility Scope for Recurring & Ad-Hoc Bookings

Clause 4.2 specifies "*Recurring bookings*" and "*Ad-hoc bookings (admin approval)*". Are recurring bookings restricted exclusively to academic staff/lecturers for studio labs, or can students also request recurring equipment checkouts? For ad-hoc requests (e.g. vacation filming), does approval escalate directly to the Module Coordinator or to the Store Manager?

> **Context:** Required to establish the automated approval matrix and recurring recurrence scheduler rules without causing scheduling conflicts.

[Authority's Response / Notes]

Q1.3 Package Kits vs. Loose Consumables Item Tracking

For "*Package bookings (equipment sets)*" (e.g. Cinema Camera kit with body, lenses, batteries, flight case), does FMS require serialized barcode scanning for every individual accessory at counter check-out/in, or is scanning the parent kit container tag sufficient unless an item is flagged missing? For "*Loose items*" (sandbags, cables, C-stands), does FMS require batch quantity-based tracking without unique barcodes?

> **Context:** Determines whether the store checkout interface enforces serialized kit manifest validation or aggregate bulk-quantity decrementing.

[Authority's Response / Notes]

2. Smart Locker Integration & Hardware Protocol

Clause 14.4 & 1.2

Q2.1 Existing Smart Locker Hardware Make, Model & Interface APIs

Clause 14.4 stipulates vendor integration with the existing smart locker system. What is the exact make, model, and controller hardware installed at Block 52? Does the existing locker system expose standard cloud REST APIs, webhooks, or local controller SDKs? Is technical integration documentation available for review?

> **Context:** Clause 3.0 mandates zero integration with internal NP infrastructure while SaaS is cloud-hosted; clarification ensures network protocol and controller interface feasibility.

[Authority's Response / Notes]

Q2.2 Locker Maintenance Vendor Support & Licensing Fees

Will the incumbent locker maintenance vendor provide active technical support, API keys, and sandbox access for testing? Are there any third-party gateway licensing or firmware update fees payable to the locker vendor?

> **Context:** Clause 14.4 states all integration costs must be in the quoted price; this de-risks unforeseen proprietary third-party access fees.

[Authority's Response / Notes]

3. Physical QR Code Deployment & Tagging Scope

Clause 14.1 (Mandatory)

Q3.1 Asset Staging Logistics for 1,000 On-Site Equipment Items

Clause 14.1 requires vendor manpower to physically print, tag, and configure up to 1,000 equipment items across Block 52 (#01-01, #01-02, #01-03). Will the equipment items be staged centrally in one store bay by FMS staff for vendor tagging batches, or will vendor personnel tag assets across dispersed active facilities during operational hours?

> **Context:** Sizing on-site tagging manpower allocation and scheduling to prevent disruptions to active academic lessons.

[Authority's Response / Notes]

Q3.2 Equipment Surface Substrates & Label Durability Standard

Are there pre-existing NP asset barcode numbers that must be cross-referenced or retained? Are there specific material preferences for QR labels (e.g. synthetic matte polyester vs. scratch/waterproof anodized finish) suitable for heavy field production wear?

[Authority's Response / Notes]

4. Master Data Migration & Sample Dataset Request

Clause 1.2 & 10.4

Q4.1 Request for Anonymized Sample Equipment Dataset (CSV / Excel)

To ensure automated data migration pipelines, kit nesting hierarchies, and validation rules precisely align with FMS real-world operational records, could FMS provide an anonymized sample extract (approx. 20–50 rows of CSV or Excel) reflecting typical cameras, kits, audio gear, and store locations?

> **Context:** Allows pre-building custom CSV parsers prior to contract kickoff, accelerating Phase 1 discovery and populating high-fidelity equipment models for the 15-minute live demonstration.

[Authority's Response / Notes]

5. User Roles, Sizing & Authentication Model

Clause 9.1, 9.2 & Part C

Q5.1 Estimated User Population & Concurrency Sizing

Could FMS provide estimated user sizing:

- Active Students across all cohorts (Years 1 to 3)?
- Lecturers & Academic Approvers?
- Technical Officers & Store Managers across Block 52 bays?
- Anticipated peak concurrent users during semester loan release days?

> **Context:** Sizing cloud server capacities, database connection pools, and email notification quotas.

[Authority's Response / Notes]

Q5.2 Department-Wide Licensing Model (Part C)

Since the price schedule (Part C) specifies a single "1 Lot" quotation for 36 months without user tiers, please confirm that the proposed SaaS platform is to provide unlimited user accounts for all authorized FMS students and staff without per-seat licensing surcharges.

[Authority's Response / Notes]

6. Information Security Governance & Hosting

Clause 13.1 & Annex A

Q6.1 ISO/IEC 27001 Certification Governance

Clause 13.1 mandates a valid ISO/IEC 27001 certification. Where the SaaS solution is hosted on certified Tier-3 / Tier-4 public cloud infrastructure located in Singapore (e.g. AWS Singapore or Google Cloud Singapore) that holds institutional ISO/IEC 27001 and SOC 2 Type II certifications, please confirm that submitting the cloud infrastructure provider's ISO 27001 certificate satisfies this requirement.

[Authority's Response / Notes]

7. Live Demonstration Logistics

Clause 2.3

Q7.1 Demonstration Environment & Physical Hardware Requirements

For the 15-minute system demonstration (Clause 2.3), will the evaluation panel expect physical on-site handheld 2D barcode scanners and mock smart locker hardware, or is presenting the SaaS web application and mobile responsive workflows via live browser demonstration sufficient?

[Authority's Response / Notes]
